

TRAIL20 wins at 10 days; GARCH edges it at 30 by less than its in-sample advantage

Identical dev-window stock-days per horizon. GARCH parameters are fit in-sample, so its 30d edge is not treated as a win.

Sources: 10-day MAE from results/gate_log.md (K0 decision, logged). 30-day MAE from src/26_forecaster_horse_race_30d.py - EXPLORATORY, never logged. Every bar carries a direct value label (relief rule for the aqua slot).
